Company Profile

footcomfort is an orthopaedic laboratory based in southern California that specializes in the fabrication of custom foot orthotic inserts, foot orthotic braces and the **Footcomfort** brand of custom orthotic sandals.

We have 30 years of experience and currently ship hundreds of orthotics each business day.

Our Orthotic are enjoyed by thousands who have benefited from our customized solution for their specific conditions. We also have prefabricated and fitted orthotic inserts.

Custom Foot Orthotics are the core of the product line. The orthotic material is selected according to its therapeutic purpose. The style depends on the intended use. We have orthotic styles that fit every type of shoe, so the added comfort can be enjoyed in all walks of life.

Foot Orthotic Braces have been added to our product line. Our braces have proven to be superior to other braces because they have our seasoned experience as custom orthotic fabricators.

Footcomfort Orthotic Sandals are our brand made in our orthotic production line. The entire fabrication process is completed at our location. An orthotic is thermoformed from the balanced positive cast. Straps, midsoles and soling are then attached to create:

"The Worlds Most Comfortable Sandal".

85% of the orthotic orders ship the next day after receiving a completed order form. Sandal and brace orders take 2-3 days to ship.

The Sandal Department can modify most sandal brands to replicate or embed your orthotic. Birkenstocks and Mephisto brands work well for modifications.
